WHITE TUSKER
PRIVATE LIMITED

FEATURE SET

Tusker Management

Projects, procurement, attendance and an AI assistant in one platform, on the web and on the phone, built for teams that design, buy and build.

PREPARED BY
White Tusker Private Limited, Bengaluru

DATE
October 2026

AT A GLANCE

Run the whole operation, not just the task list

Most project tools stop at boards and tasks. Tusker Management carries the work end to end: who is doing it, what it needs, who supplies it, and who turned up.

01

Work management

List, Kanban and Gantt views, dependencies, comments, files, meetings and daily reports.

02

Procurement

Indent to RFQ to vendor quotes to purchase order, with approvals at every step.

03

People

Attendance by shift, a face-recognition kiosk, leave requests and holidays.

04

Travis, the AI assistant

Ask questions or get work done in plain language, with your confirmation before anything changes.

3

apps: web, mobile and a stand-alone API

7

workspace roles, plus project roles

1

workspace for projects, vendors and people

WORK MANAGEMENT

Plan it, track it, see it slip before it does

- **List, Kanban and Gantt**, for one project or the whole workspace
- **Subtasks with dependencies**; drag a bar on the Gantt to reschedule
- **Six statuses**: to do, in progress, review, on hold, completed, cancelled
- **Tags, comments with read receipts, attachments** and an activity feed
- **Project dashboards** with progress, workload and upcoming leave
- **Fast with big projects**: long task lists load as you scroll

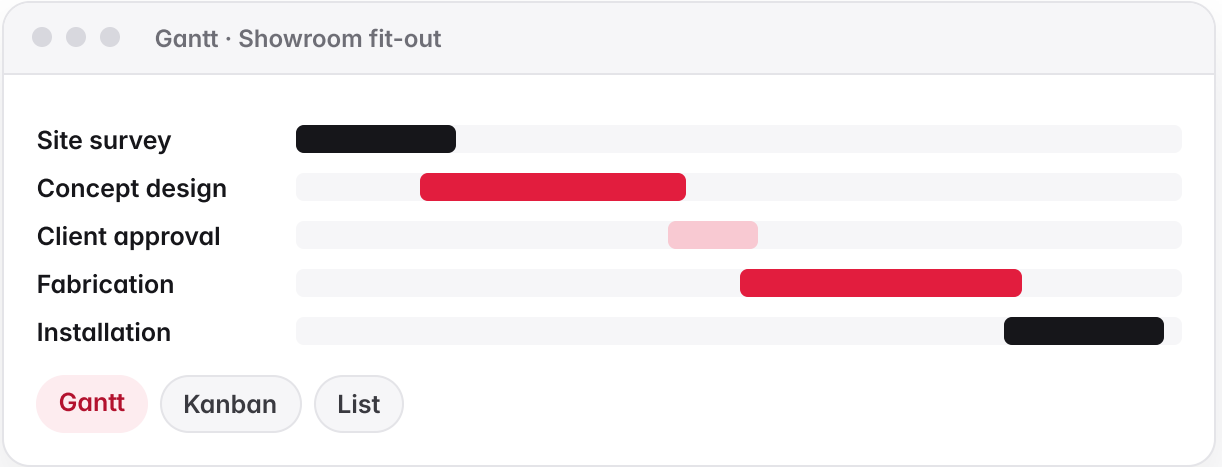

Illustration of the screen. Figures are sample data.

EVERYDAY COLLABORATION

The conversations and check-ins that keep projects moving

01

My Space

Personal to-dos, a personal board and direct messages, all in one place.

02

Meetings and calendar

Internal, client, project review and one-to-one meetings, in agenda, week and month views.

03

Daily reports

Each person logs what they did against their tasks; managers review and see who hasn't submitted.

04

Notifications

In-app, real-time and push to the phone, so nobody waits for an email.

05

Team widgets

Birthdays and announcements broadcast to the whole workspace.

06

Audit log

Every important change recorded: who, what and when.

PROCUREMENT

From a site's material need to a signed purchase order

REQUEST
Indent
The project raises what it needs, line by line

→

APPROVE
Quantities checked
Owner approves what's needed

→

SOURCE
RFQs to vendors
Suggested vendors for each material

→

COMPARE
Quote matrix
Vendors side by side, final rates approved

→

ORDER
Purchase order
Numbered per buying company, tracked to delivery

APPROVAL CHAIN

The right sign-off at each stage

Quantities, the vendor comparison and the final rate each go to the owner or manager who should approve them. Line items can be approved, held for a vendor or rejected one by one.

PURCHASE ORDERS

Ordered to closed

Orders move from ordered to delivered to closed, with payment tracked as unpaid, part paid, paid or overpaid. Export to Excel or PDF.

VENDORS AND QUOTES

A vendor list that gets smarter with every order

- **Vendor registry** for suppliers and contractors, with GST registration
- **GSTIN lookup** fills in a vendor's registered details
- **Material capability matrix**: who supplies what, at what rate
- **Quote import**: read a vendor's quotation from a PDF or a photo straight into the comparison grid
- **Material catalogue** and units of measure shared across projects

THE FEEDBACK LOOP

TYPE
TMT Steel 10mm
On an indent line

→

SUGGEST
Matching vendors
Marked if supplied before

APPROVE
Winning quote
Becomes a known rate

→

LEARN
Vendor profile grows
Suggested next time

ATTENDANCE AND LEAVE

Know who's in, who's out, and what that means for the plan

- **Shift schedules** shared by departments, each with its own timings
- **Attendance**: present, late, half day, absent or on leave, with check-in locations
- **Leave requests** for sick and casual leave, with approval
- **Public holidays** per workspace
- **Leave projections** shown on project dashboards, so planners see gaps coming
- Check in from the phone app or at the office kiosk

FACE-RECOGNITION KIOSK

Walk in, look up, you're checked in

A camera at the door recognises the employee and records check-in or check-out against their employee ID, location and device.

Privacy built in: the face is recognised on the kiosk itself. Only the employee ID reaches Tusker Management; no face data is sent or stored.

TRAVIS, THE AI ASSISTANT

Ask in plain language. Confirm. Done.

ASK

- Workspace and project summaries
- Overdue tasks and deadlines
- Who has capacity
- Attendance and leave
- Procurement status
- Daily report summaries
- Find any task

DO

- Create tasks and subtasks
- Assign and update tasks
- Change status
- Draft and submit daily reports
- Draft and submit indents
- Request leave
- Jump to any record

- **Nothing changes without your OK**: Travis proposes, you confirm
- **Sees only what you can see**; every request is checked against your permissions
- **No accidental duplicates** if the network retries

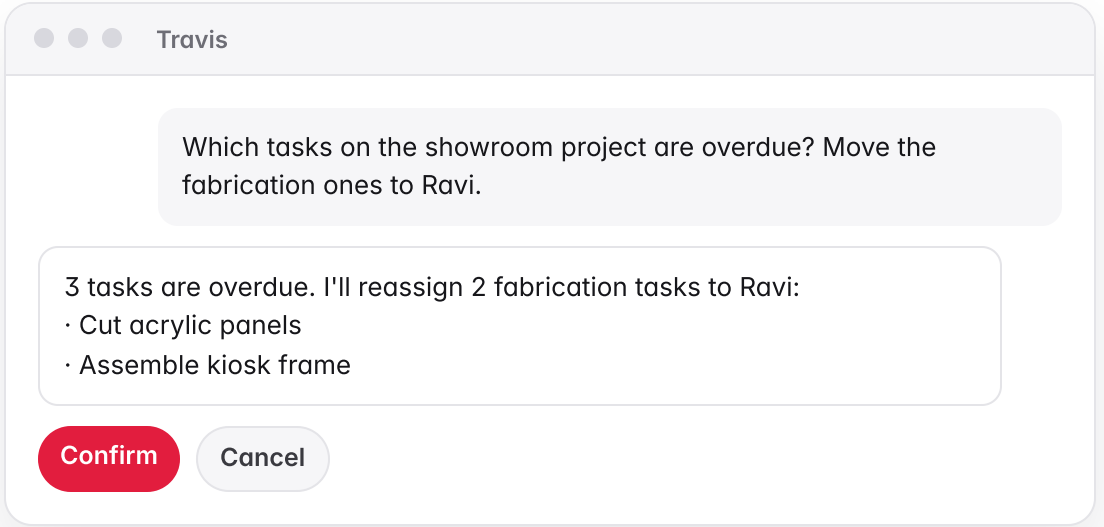

Illustration of the screen. Figures are sample data.

MOBILE APP

The whole workspace in the field, on Android and iPhone

- **Projects**: dashboard, task lists, Kanban, subtasks, materials and activity
- **Touch Gantt** and the calendar in agenda, week and month views
- **Procurement on site**: raise an indent and follow it through approval
- **Attendance and leave**, including team leave approvals for managers
- **Team workload**, direct chat, My Board and My Space
- **Travis** in your pocket
- **Push notifications** the moment something needs you

One account, every device

Sign in once and the same workspace, permissions and live updates follow you across web and phone. Phones and tablets, light and dark mode.

Android · iPhone · Tablet · Web

ROLES AND PERMISSIONS

Fine-grained control, without locking anyone out

THREE CHECKS, ALL MUST AGREE

1

Workspace role

Owner, admin, manager, procurement, accounts, member, viewer

2

Project role

Project manager, coordinator, lead, member, viewer

3

Capability grid

Admins switch individual actions off for a role or a person

- **Capabilities narrow, never widen**: switching something off removes it everywhere
- **Project settings** let a project be stricter than the workspace
- **The owner can't be locked out** of the settings that fix access
- **Checked on the server** for web, mobile and Travis alike
- **Departments** with their own members and shift times
- Invite people by email; workspace activity log for admins

PLATFORM

Built to run reliably and grow with you

01

Web, mobile and API

A fast web app, native mobile apps and a stand-alone API that other systems, like the attendance kiosk, can call.

02

Real-time

Changes appear live on every open screen, with push notifications to phones.

03

Files

Attachments and documents uploaded straight to secure cloud storage.

04

Exports

Procurement data to Excel and PDF.

05

Quality

Automated tests and checks run on every change before it ships.

06

Deploy your way

Hosted, or run the whole stack with Docker on your own servers.

WHITE TUSKER
